Good morning Hanna and Craig,

Thank you both for your time on the Petra Point Project. Here are some thoughts for picking up trash safely and efficiently at this location as it is currently drawn.

The safest and most efficient way to service this property would be for us to pull off of Alworth street and onto this property, service one side of the street, have a no parking lane turn around at the end of the street, and service the other side of the street on our way out of the property. This way our truck would be off of the busy street while providing service.

A second way for us to service this property would involve a dumpster. For this to be feasible we will need a hammerhead turn around at the end of the property. The dumpster would need to be placed at one side of the hammerhead, and the other side of the hammerhead would allow us room to back up and then exit the property.

A third option is to provide service to the property in the manner which it is presented on the drawing. In this case the residents would all have to bring their trash carts out to Alworth street and we would provide residential cart pick up there.

I hope that this is helpful. Please contact me at any time if I can help in any way.

Thank you,

Bill Pastoor
